The Problem

The problem of public transportation in Egypt which represents :

the high prices of taxis, Uber, Karim and swvl and other problems in their services
“other problems”

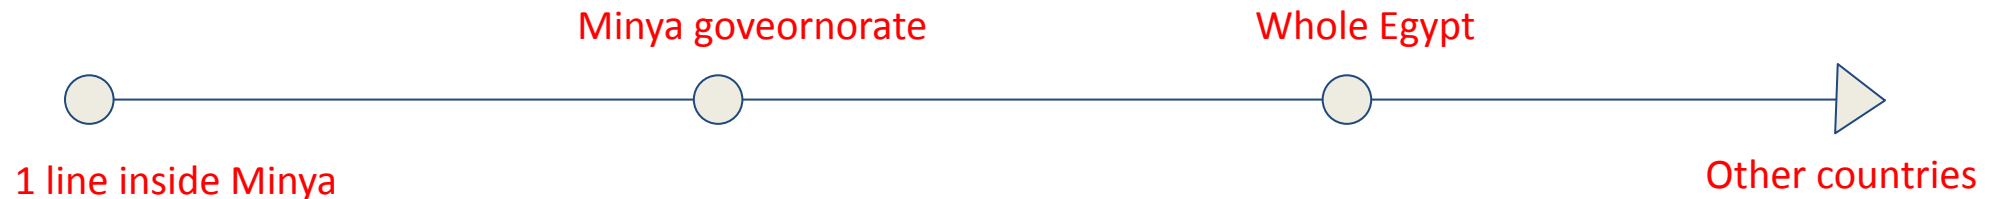

the lack of comfort,
the mistreatment, and the lack of
safety

the lack of means of
transportation

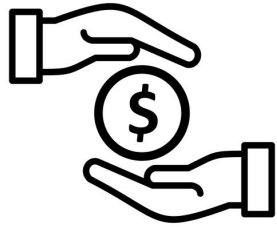

Target User

- *Now we target Minya governorate that represents more than 80,000 commuters, later we will target people all over Egypt and other countries suffer from transportation problems (commute).*

Solution

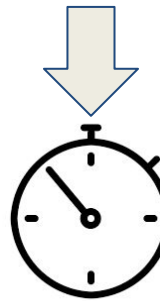

Photo from one of our trips

*affordable for all
people*

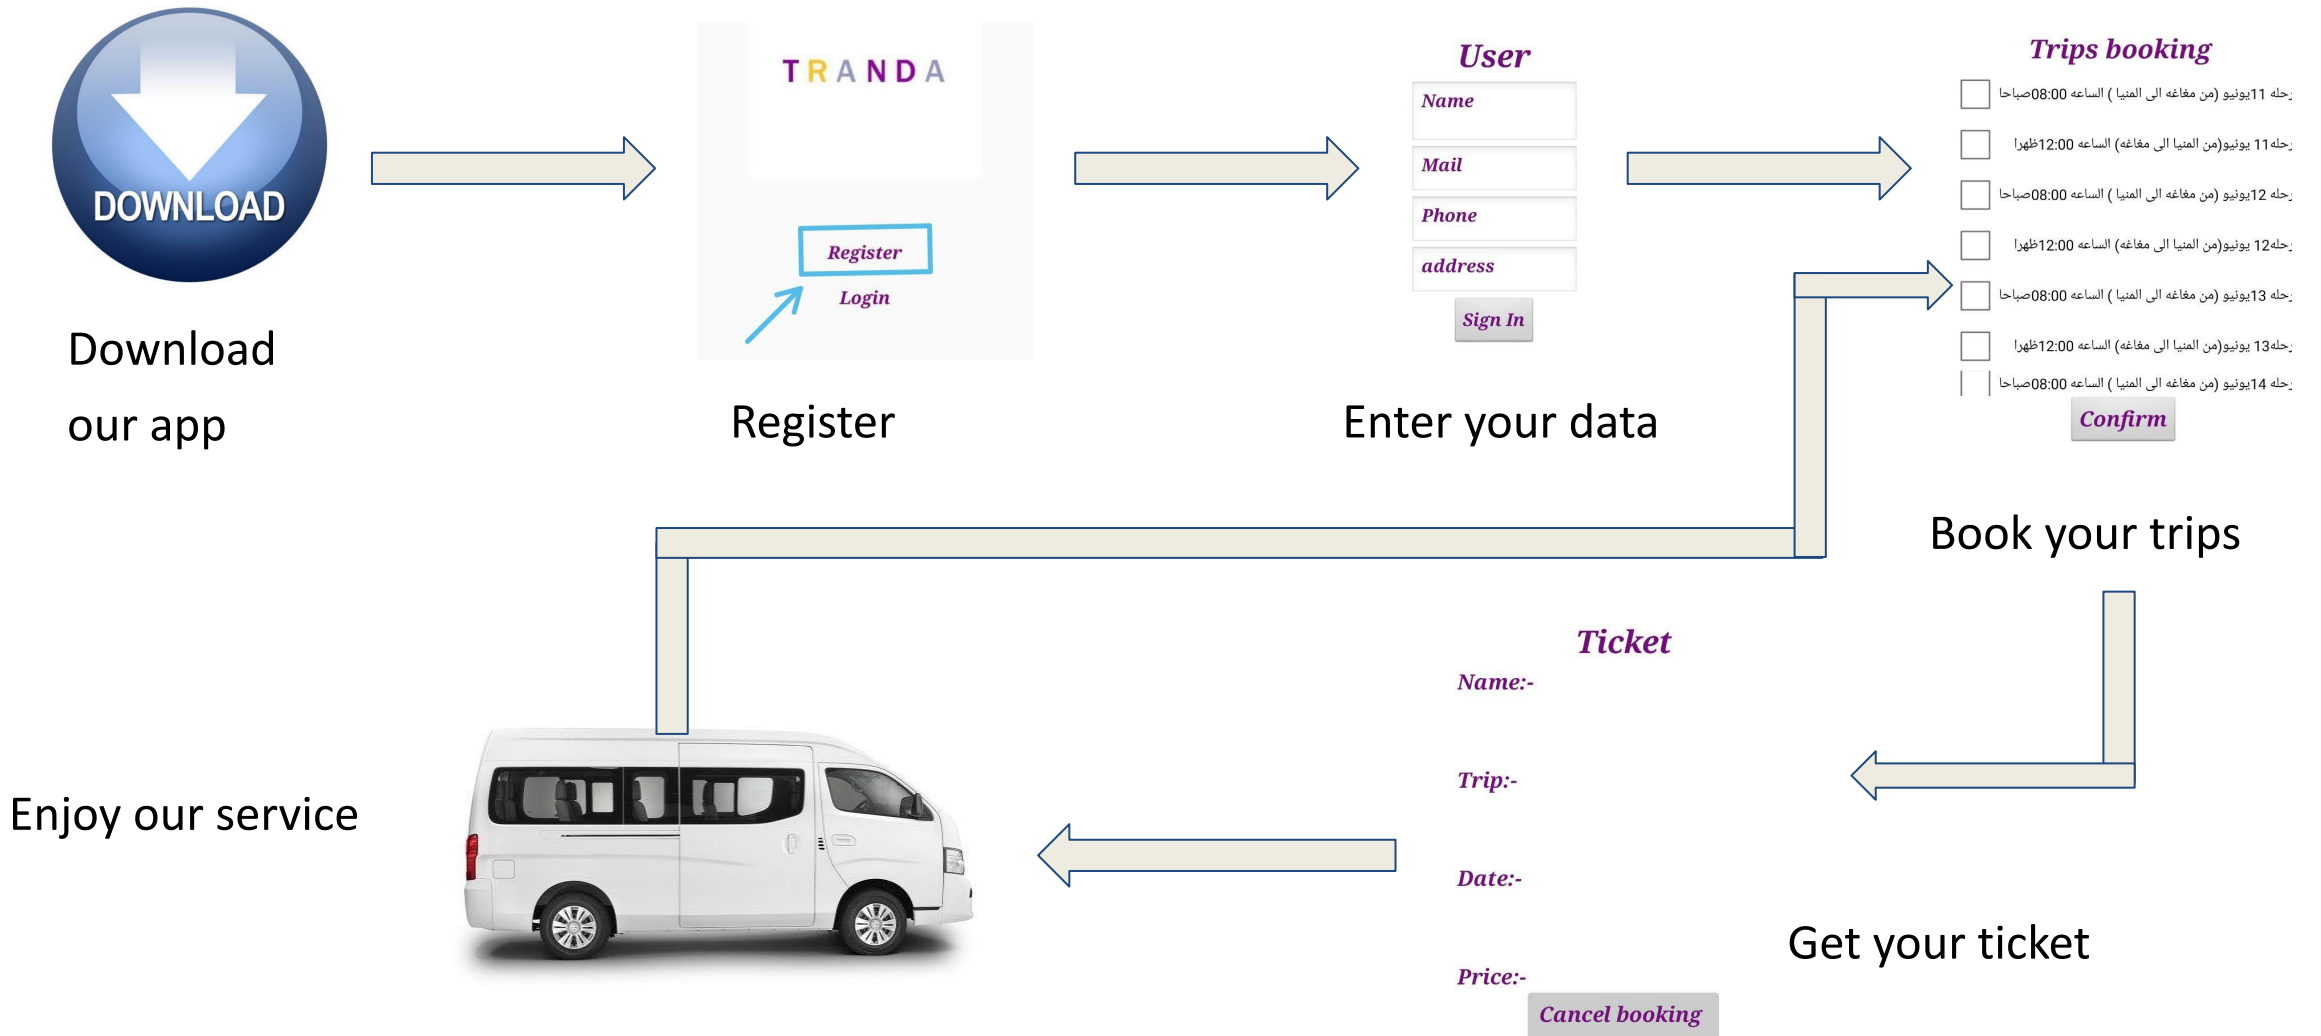

*We provide safe,
comfortable,
air-conditioned and
guaranteed
transportation mean*

punctuality

Solution

Value Proposition

the comfort and safety

Ensure access to specific appointments

Ensure that transportation is always available and An air-conditioned, clean transportation mean

Fit prices for all people.

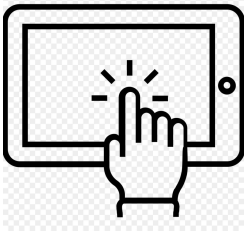

Good treatment for drivers and users

This values is provided by providing a comfortable and secure transportation mean to people choose their own appointments, register through tranda application and book trips and receive tickets

Innovativeness of your Solution

You can cancel your reservation and get your money back with one click, and you can also book and guarantee the return of your trip with one click.

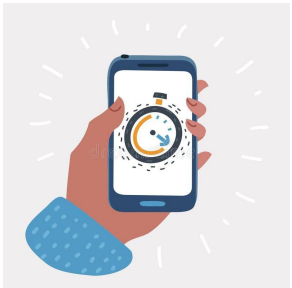

we can let the app determine the user's trip via GPS.

Easy for the user and specify all appointments and trips

Providing privacy for any data taken from users

You get alerts when the bus is approaching the station and how long it has to travel.

Market Sizing

- *Revenue in the Public Transportation segment is **\$261.20 billion** in 2022. Revenue is expected to show an annual growth rate (CAGR 2022-2026) of **5.11%**, resulting in a projected market volume of US **\$318.80 billion***

Product Market Fit - Hypothesis and Evidence

Hypothesis #1:

Do people need our service and be able to pay a little more money for it??

Operations #1:

if you need our service join our telegram group or facebook page.

Result #1:

YES

Evidence #1:

A total 170 users have been attracted to Tranda's Telegram group

About 104 customer were attracted to the Facebook page

Based on results of hypothesis #1 we decided to start

Hypothesis #2:

can we get customers??

Operations #2:

- select line
- Hiring drivers
- High standard service

Results #2:

YES, we managed to test our operations and attract customers by our experiment through 1 week

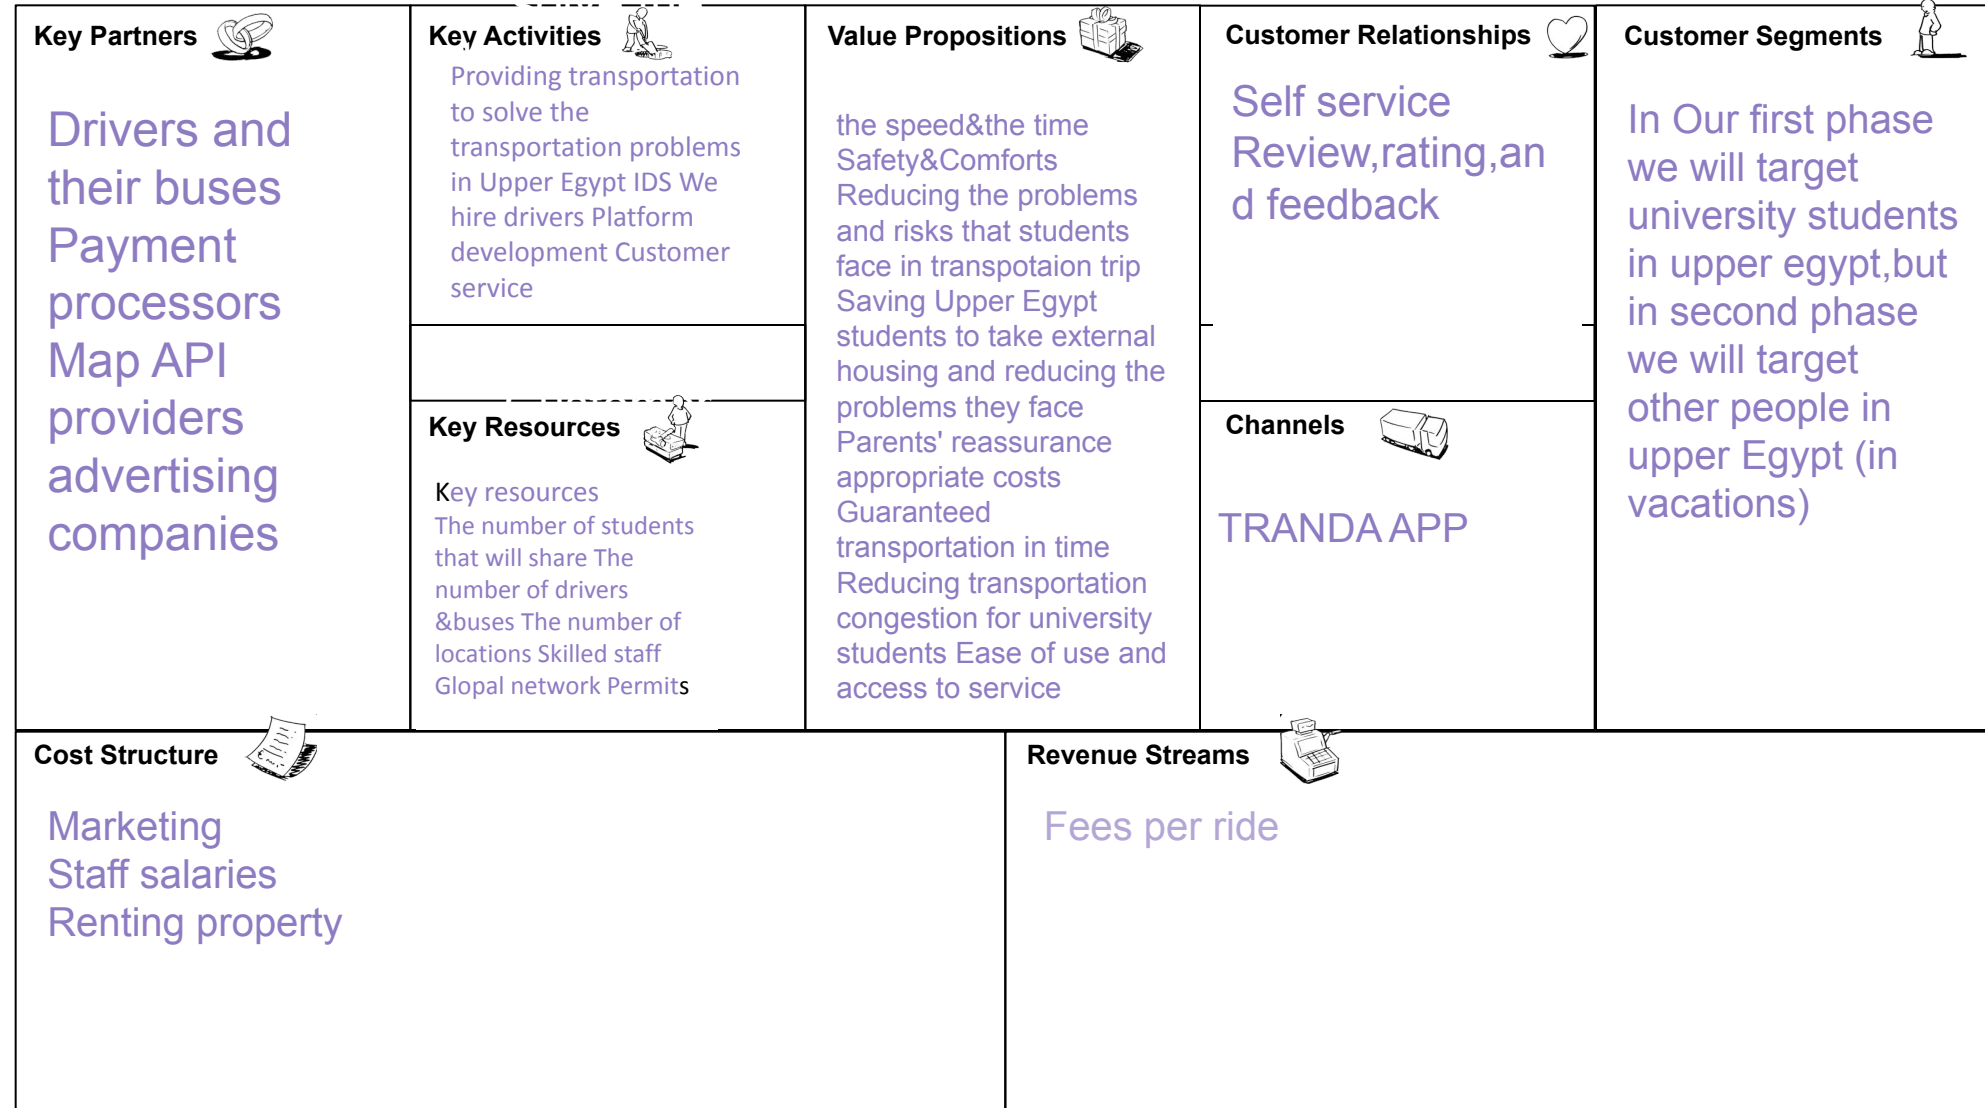

Evidence #2:

- We managed to do 13 trip/week.
- we managed to attract 76 customers in that week.
- customers tickets:

Key Metrics

- We are in Stickiness stage

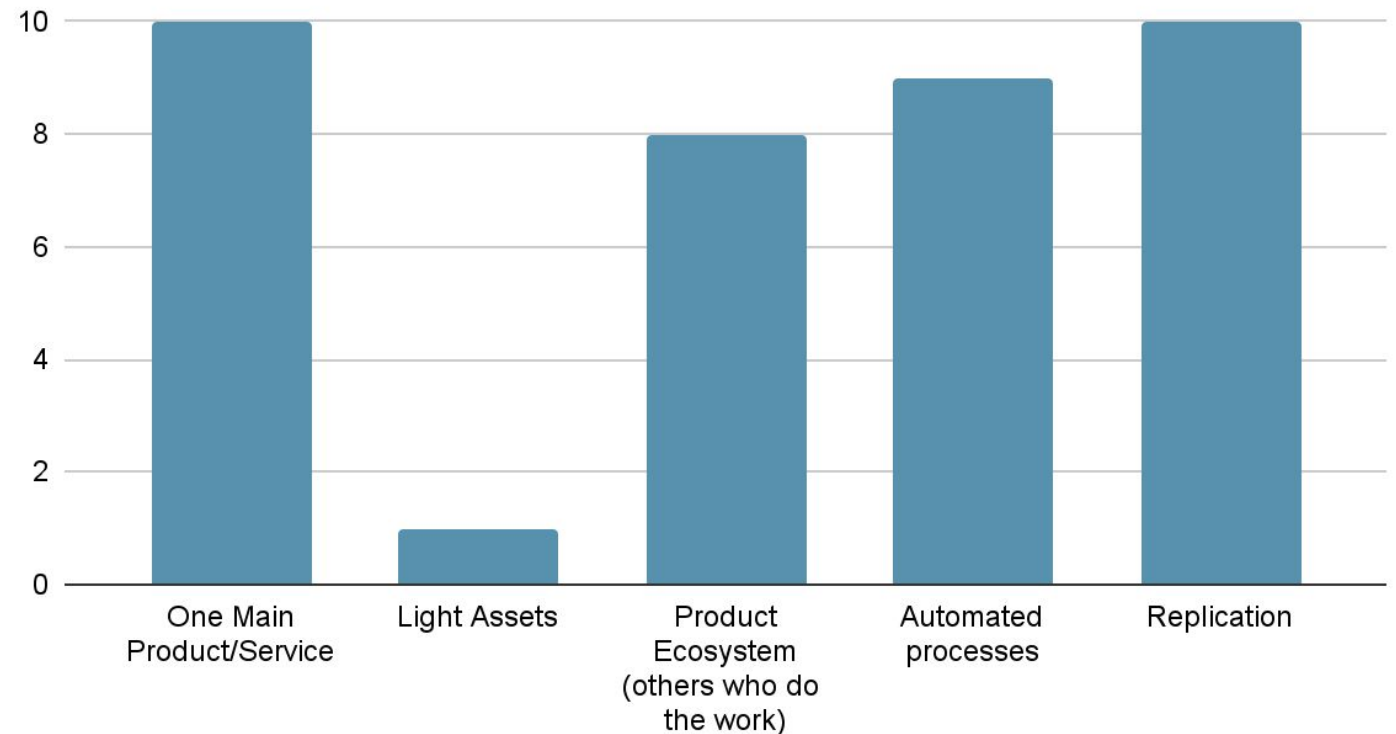

This metrics based on our experiment ,but for the future our customers will increase by 30% per month

Acquisition	we get our customers through diffrent channels like social media,offline&online ADS,Events,partenerships (in the last step we reached 500 persons)
Activation	we can get our customers quickly to use our service .the only should download our app,book,and enjoy our service(in the last step we reached 500 persons ,170 joined our channels,and 76 booked trips)
Retention	we managed to retain 74 customer from 76
Referral	our good service make customers invite their freinds to use it,98% of our customers invite other freinds.
Revnue	we can increase revnue by add more customers,and ADS.

Sustainability and Scalability

- operations will be automated .
- process of payment will be done through VODA cash , visa or manually
- we can let the app determine the user's trip via GPS
- The size of the transportation market is able to lead us to scale.

Points scored

Thanks

Participants create their own high concept pitch.

My company, (Tranda)
is developing (Mobile App)
to help (people at Minya Governorate)
(solve a problem of public transportation)
(with providing safe ,comfortable ,and
affordable means of transportation)
